My last week was pretty good. I was totally engaged in learning Mathematics and Computer Science. Also I had a whale of a time with my friends in the center. So it was quite hard, but really interesting.

At first, we need to open a file and save it with the extension md. For example, slide.md may be the name of our file. At the top of the Markdown file, we need to write the following: "marp: true". This will enable the Markdown Presentation Ecosystem. Now we can create slides. If we set paginate: true, then slide numbers will appear. It is our choice whether we want to show the slide numbers or not. Now, we can export the created presentation slides in many file formats such as PDF, HTML, and PowerPoint document.
